My name is Michelle J. Posey. I live at 1380 E. 12th Street, Cleveland, OH 4106. My phone number is 216.609.4103. michellekemba @aol.com. My bachelor's degree is in business Administration and I have worked as a teacher, college administrator and event manager. I am the mother of three children, all of whom are college graduates.

Until March 2, 2018 I was well and enjoying my life. Volunteering at Playhouse Square weekly and preparing for my organic garden at E. C. Grows where I am a garden leader. At that time, I was living at 12730 Shaker Boulevard in apartment 1408 located on the top floor of the building. For several weeks I heard people walking above my ceiling doing work. Sometimes until 10 pm at night. On March 19, 2018 men were very loud all evening and at 1:45 I got out of bed, walked up the stairs to the roof and asked them to be quiet so I could get some sleep. They told me they could work on the roof from midnight until 6 am. I realized this was disturbing the peace so I left a message with the building manager and called the police. While talking to the police I decided not to have them come to my building. The noise continued until about 3 am in the morning. Several days later, March 21st I felt nausea and wondered why I was feeling this way. The following morning, March 22nd I woke up and was so dizzy I could not get out of bed for a while. Within 24 hours of the completion of the 5G cell tower above my head I was sick. My symptoms included headaches, loss of balance, slurring of words, brain fog, dizziness and nausea. March 24, 20018 was the last time I stayed at my apartment. I only went there to pack and prepare to move. After staying out of the apartment most of the time I began to have less dizziness, loss of balance and brain fog.

After finding out what was installed my daughter called the Commscope company and they told her that SBJAH4 is an antenna that is 5G. I slept at family and friends' home from that day until Monday April 30th when I moved out of Jaelot Apartments.

I purchased an EMF device called Smart Sensor and radiation in my apartment was as high as 95.4 mg. 1.0 mG (miligauss) is safe. Please stop these devices now. It may be legal to install 5G cell towers but it is WRONG.

This Microwave sickness has caused me much suffering and drastically changed my life. I constantly check the radiation I am exposed to and had to move to a safer location, quiet unexpectedly, to save my life from the symptoms I have, dizziness, brain fog, and insomnia, loss of balance, headaches and nausea. And at some point, the possibility of brain tumors and cancer. I am hopeful by living in a house that has lower radiation I will continue to return to the healthy person I was before this happened to me.
