State: South Carolina

Name: Lisa Elliott

Occupation: My name is Lisa Elliott and I am an interior designer.

Wireless Health Effects: I started feeling symptoms from wireless technology 8 years ago when the wireless technology in my car started to make me feel spacey and gave me heart palpitations during drives to my parent's home in another state. At the time I was living in a condominium complex with power lines buried under my house with a computer guru living next door that had all kinds of wireless emissions. I had 33 wireless hotspots that were measured on my outdoor deck and I did not even have Wi-Fi. I also had 2 cell towers built within a mile of my house. Later on I started to get blood pressure fluctuations, insomnia, chest pain, auras of light, skin rashes and am no longer able to use a computer. Now I feel symptoms from EMF fields like street light cameras when stopped at a red light. I have problems wearing necklaces, bobby pins and underwire bras. I get headaches when airplanes, helicopters or drones fly over my house. I experience rapid heartbeat, and dizziness upon standing. I cannot stand under fluorescent or mercury lights without feeling sick. I can't use my microwave, vent hood and I have to turn off all front yard lighting and remove dimmer switches in my home. I cannot watch DVDs or even listen to the radio.

Wireless technology has affected my life: I am an interior designer and was making upward of $160,000 a year from my profession. Because of my electro-sensitivity I am no longer able to work like I use to. My income has dwindled to about $30,000 a year. I have to pay someone to check my email for work. I was no longer able to live in the condominium and had to move in with my parents to find relief. I cannot travel on airplanes; I cannot stay in hotels; I cannot sit in restaurants or attend movies or concerts. I have trouble going to grocery stores because of all the cell phones and EMF emitted from refrigerators. Even going to my doctor's appointments have become a real challenge because of all the wireless radiation there.

My daughter was a successful Executive Director of a children's advocacy group and was very much engrossed in this technology. She had two miscarriages before having her two children. My daughter just recently had a stroke at the age of 39. She is now going to physical therapy to learn how to walk and talk again and has not recovered from her stroke. I was unable to visit her in the hospital or in her home because the trip there is unbearable to me. My brother who was a dentist and an avid user of his cell phone just recently died of a brain tumor.

Concerns for 5G: I am frightened out of my mind at the prospect of 5G. I currently do not have any of the technology and I'm completely unable to use it because it makes me sick. I want my leaders to stand up for me and not the wireless industry.
