

State: South Carolina

Name: Lisa Meserve

Occupation: My name is Lisa Meserve and I was a dental hygienist then a substitute teacher but I am now unemployed.

Wireless Health Effects: Since the installation of the two smart meters in August 2016, I have had symptoms of depression, dizziness, loud ringing in my ears along with deep pain like a bad earache, headache, blurred vision and eye pain, white flashes across field of vision with eyes either closed or open, jaw and facial pain, dental pain, burning and itching of my skin and vibration like an internal shaking, hip and lower back pain, heart palpitations, explosive anger and severe irritability, a feeling that I cannot cope (a disaster for interpersonal relationships), impatience, brain fog and severe cognitive impairment, takes a long time to accomplish anything if at all, spine, muscle and joint pain, cramping in feet, communication problems, word finding problems, severe nausea and abdomen pain. Where is the quality of life here? This makes life extremely hard to cope with and it is very sad for family, the few friends left and me. To be submitted to this kind of torture in my own home is inhumane. It is very preventable and unnecessary.

Wireless technology has affected my life: Because I didn't know that the wireless smart meters had been installed, I was pretty frantic at what could be causing my symptoms to be so bad and so suddenly. After finding a door tag from Duke Energy Carolinas congratulating us for the successful installation of two wireless smart meters on our property, I did a search on these meters and found that my symptoms were completely in line with the RF radiation coming from them. I had to flee my home after eight days to a campground living in a tent, but the damage was already done. I am now extremely sensitive to cell phones that are on, computers, WiFi, cell phone towers, electronics in cars, smart meters in stores, hospitals, movie theaters, libraries, schools and walking around my neighborhood where I had not been before. There is no safe place to go to be away from this damaging RF radiation. I can never tell how much of a dose I am getting when around it. Who can tell how strong the actual exposure is and from how many devices? I just experience horrible symptoms.

The isolation that this causes is unprecedented. I tend to want to just stay home due to low energy and not feeling well. Being home compounds the sensitivity because of the cumulative effect of the exposure and my home is no longer a safe refuge. I cannot visit with friends who have wireless meters because I get a headache and pain down my spine, in my hips and lower back and I cannot think straight. Then the

depression ramp up and I just want to run. When I go back home, I am right in the exposure once again. It is truly a nightmare. I have been forced out of my home 6 times living in a tent in a campground, staying with friends out of town which is not like a pleasant visit like it normally would be because I am not my normal self. I came back to South Carolina in February and my brain, body and eyes are so negatively affected by the radiation that I have been sleeping in my vehicle in a public park with no bathroom accommodations. I do not feel safe and many a night the temperatures got down below freezing. I am in pain from being in a small vehicle for my 5'5" frame and I do not sleep well at all. This is not OK in this country for a utility to be able to create a scenario such as this and not be forced to take their meters off my home and put safe analog ones on so that I can be safe in my own home. It is more in line with Communist China. I even purchased analog meters and installed them on my home myself however nine days later, Duke Energy came on a Friday at 5:00 PM to cut off our power. They would only restore it the next day if we allowed them to put a Smart AMR digital wireless meters which pulse radiation also. They are resisting my need for safe analog meters even though my medical providers have sent letters explaining what the Smart meters are doing to worsen my health and requesting their removal.

Concerns for 5G: Nothing that brings harm to an individual or family should ever be tolerated being installed on a home and certainly not without their knowledge or consent. It does not matter where it comes from. We have laws protecting us of as much. However there is a problem when those laws are ignored when you call your local police and describe that the utility has installed something on your home that is causing harm and you need it removed immediately. They protect the utility and I am the taxpayer paying their salary. I learned that the law enforcement are not allowed to enforce the utility's corporate policy yet that is exactly what they are doing and allowing the utility to trespass on my property. This is just WRONG.
