To Whom It May Concern:

I've owned my own home in central Washington (state) for three years now and for the past year and a half I've had nonstop ringing in my ears. I have a smart meter outside the master bedroom on a pole a meter or two from my outside wall.

I live in a very rural area. When I first began having problems, I was hearing low tones and then out of the blue the power company came and changed out my smart meter for a different kind of smart meter. It was then that the low tones subsided and the high tones that almost never stop began.

I don't know if there is a proven relationship but it was a pretty amazing coincidence.
