MEDICAL CERTIFICATE – METTE KENFELT

Issued May 1, 2025

Original Danish Medical Certificate with English Translation

Hvor længe har De været patientens læge
siden juli 2017

1. Sygehistorie

Her beskrives alle for sagen relevante sygdomsforløb og tilstande. Der kan indgå relevante udskrivningsbreve, speciallægeundersøgelser, laboratorie-undersøgelser, røntgenundersøgelser, funktionsprøver m.v., evt. i uddrag. Forbrug af medicin, tobak, alkohol og narkotika beskrives, hvis det er relevant.

Patient diagnoser er EHS, elektromagnestisk hypersensibilitet og MCS, som multiple kemisk sensitivitet, som gøre at hun ikke kan tåle sort gummi, formaldehyd og alt pollen. Hun tåler ikke trådløs stråling fra mobiler, computere etc.
Prognosen herpå er ikke god, da hun grundet sin diagnoser ikke kan deltage i arbejde, hvor hun udsættes for disse stimulanser, som jo findes overalt i vores samfund.
Hun lever i eget hjem, hvor intet er trådløst, alt er kablet og har forsøgt at danne en virksomhed med fastnet telefon og kablet kommunikation ud af lejligheden.

Der er ikke nogen behandlingsplan. Patient har selv afsøgt alle muligheder for behandling og intet har hjulpet til at hun kan have en tilværelse som andre, grundet hendes diagnoser.
Der findes ikke yderligere behandlingsmuligheder for min patient, derfor vil hendes samlede funktionsniveau ikke blive bedre fremadrettet.

Hun vil aldrig kunne komme tilbage på arbejdsmarkedet grundet alle hendes symptomer, som er følgende: manglende koncentration, som opleves som larm i hovedet konstant, bliver svimmel og får kvalme, det er ikke hovedpine. Dette opleves her ved attesten efter 20 minutters samtale, hvor patient grundet trådløst internet i konsultationen langsomt får det dårligere og lukker ned kognitivt, føler at der et trådnet som presser hende fysisk ned.

Hendes funktionsevne rent arbejdsmæssgt er påvirket i en så stor grad at hun ikke vil være i stand til at lave noget som helst arbejde i samfundet uden for hendes hjem nu eller fremadrettet.

Hun vil aldrig have mulighed for at deltage i virksomhedspraksis uanset skånehensyn. Jeg ser klart at patient skal på førtidspension, da jeg ikke kan se hvordan hun på nogen måde kan bidrage til arbejdsmarkedet grundet hendes symptomer. Det vil helt klart forværre hendes tilstand hvis hun skal i virksomhedspraktik eller andre arbejdsmarkedsrettede indsatser nu eller i fremtiden.

The original Danish medical certificate is reproduced above. The following is an English translation of the complete text.

ENGLISH TRANSLATION

How long have you been the patient's doctor?
Since July 2017

1. Medical History

The patient has been diagnosed with EHS, electromagnetic hypersensitivity, and MCS, multiple chemical sensitivity, which means that she cannot tolerate black rubber, formaldehyde, and any pollen. She cannot tolerate wireless radiation from mobile phones, computers, etc.

The prognosis is not good, as due to her diagnoses she is unable to participate in work where she is exposed to these stimuli, which are present everywhere in our society.

She lives in her own home, where nothing is wireless; everything is wired, and she has attempted to establish a business with a landline telephone and wired communication from her apartment.

There is no treatment plan. The patient herself has sought all possible treatment options, and nothing has helped to the extent that she can maintain a reasonable level of functioning due to her diagnoses.

There are no further treatment options for my patient; therefore, her overall level of functioning will not improve in the future.

She will never be able to return to the labour market due to all of her symptoms, which are as follows: lack of concentration, experienced as constant noise in her head; she becomes dizzy and nauseous; it is not a headache. This is observed here during the medical assessment after 20 minutes of conversation, when the patient, due to the wireless internet in the consultation room, gradually becomes worse and cognitively shuts down, feeling as though the wireless network is physically pressing her down.

Her capacity for work is impaired to such a degree that she will not be able to perform any kind of work in society outside her home, either now or in the future.

She will never be able to participate in a work placement, regardless of any accommodations. I clearly believe that the patient should be granted a disability pension, as I cannot see how she could in any way contribute to the labour market due to her symptoms. It would clearly worsen her condition if she were required to participate in a work placement or other employment-related measures, either now or in the future.
