Re: Department of Health and Human Services - Request for Information on Electromagnetic Fields (EMFs), Radiofrequency (RF) Radiation, and Wireless Radiation Exposure

DECLARATION OF DOROTHY "DOE" KELLY
Oct. 21, 2025

Dorothy Kelly declares under the penalty of perjury as follows:

1. I reside in Boulder County, Colorado.

2. I did not consent, nor do I consent today, to the continuous, involuntary exposure to pulsed modulated, biologically active electrical and radiofrequency / microwave (RF/MW) radiation that saturates nearly every inch of our everyday environment.

3. I led a reasonably normal life until I was made ill by the electrical and pulsed modulated RF/MW radiation from a new wireless router, part of a new fiber to the premises Internet service in our town in 2016. To speed test it against our old provider we set up another, brand new and unused router from the initial provider and let both of them run. Hence, my injuries were not from only one, but two wireless routers running concurrently.

4. The two routers, a brand-new gateway router from our new provider, and the other, an unused gateway router from Comcast (with two additional antennae in it, unbeknownst to us), gave me a microwave injury I have never fully recovered from. I am writing this Declaration to report that I was indeed injured by this wireless radiation exposure, the cause and effect and the timing of same are unavoidable, and I have never yet been restored to my previous state of health, being constantly reinjured by ubiquitous microwave radiation carrier waves nearly everywhere I go and even in my home, as neighbors' Wi-Fi and smart meters leak their toxic invisible radiation into our house. In addition, my electrical analog meter that had stood on my house for thirty years was replaced by a digital opt-out meter in spite of my objections and advocacy for safe tech in our city, and for the right to keep our analog meters, which was denied by the city, who is

over the electrical utility here. I was given no other choice than a “smart” meter except to accept, at an upfront and monthly charge, a digital opt-out meter. I received this device under duress, as witnessed by my written objection on the city’s website, noted in #11, below, wherein I was given no option where I might retain my trusted analog. Within 12 hours of our electric provider, the city of Longmont, switching on the smart meter mesh network whereby all the smart meters were activated and began their chatter that now saturates all the neighborhoods in this city, I awoke with loud microwave hearing (“signal tinnitus”) in my head that has never, ever left me in nearly three years since these meters were installed, in March 2024.

5. For 15 years I worked as a care provider, a Reiki practitioner, and a paid entertainer in a local continuing-care retirement facility in Boulder, CO. It was during these years, but specifically in April of 2016 that I was initially microwave injured by two wireless routers at my home, from which I assert my right to the title of “EMR-Syndrome” (Electromagnetic Radiation Syndrome), also known as Radiofrequency Sickness. This kind of exposure is unavoidable in today’s world, and so I am reinjured whenever I interact with people places and things that I am not ordinarily around at home, such as being on an international flight, peoples phones and other wireless equipment, wireless wearables, or simply staying in a house with Wi-Fi, DECT cordless phones, and medic alert devices that function via wireless electromagnetic radiation. I know, because I use the Safe and Sound Pro II RF meter to test the emissions, whether in my local environs, or in other places. In addition, the conducted emissions (dirty electricity, noise, transients etc.) from the digital utility meter on my house gives me tinnitus the likes of which I have never experienced, and since that meter (and all the other smart broadcast meters) was/were installed, I have ‘enjoyed’ increasing poor health, as I never have before in my life. My husband, a type I diabetic, has suffered significant vision loss since the installation of the smart meters in our neighborhood, even though ours is a digital opt-out meter. We live in conjoined townhomes which means it is impossible to distance ourselves from our neighbors’ smart meters that radiate in our direction in the alleyway. We both have experienced a variety of significant health

challenges since the advent of smart meters and mesh networks in our city. Unfortunately, I now live a somewhat cloistered life, staying mostly at home where we use ethernet cable to obtain hard-wired Internet, to avoid RF/MW radiation exposure. And believe it or not, our house still registers “high to extreme” (RF) in most places, only occasionally dipping to “moderate or low” as evidenced by yellow and green LEDs. There are approximately three small areas in our home where one could find a small patch that measured green on the meter, yet according to the Building Biology Institute, green is where we all want to be sleeping. (Dream on!)
Health Hazards of Wireless Technologies: What do we know now? (Dr. Joel Moskowitz, CHE webinar, 2024)

6. The RFR (radio frequency radiation) from both smart meters and neighbors’ routers caused me, in particular, to become symptomatic of radiation poisoning. How do I know? My face burns, my tongue burns, my forearms burn from the neighbor’s 24/7 “on” wireless router that sits approximately 20 feet from where I am writing this in my living room. When I was first “tipped” into EMR-S, the very next day I awoke with what appeared to be a black eye under one of my eyes, and spots on my face. They were not there the day before. I kept copious notes of my symptoms for the following two weeks, until we were able to get totally hard-wired. In the meantime, it was torture. I went to work just to escape our wireless predicament at home, but at work, they were already installing wireless routers on the ceilings. No where to escape to, but I did learn to identify where the routers were being placed in order to avoid them.

7. During this initial period, from April 2016 and forward, when I was first microwave-injured, I had been having sessions with a practitioner who specialized in LENS Therapy brain mapping. She was able to draw a before-and-after comparison that, in her professional opinion, showed the progress that I had been making with LENS was reversed when I was microwave-injured by the two wireless routers, and that my brain map after the traumatic event showed the signature of a closed-head injury. She reported this in a letter, to the doctor that I went to on this issue who was open-minded to my plight, but who, in the end, had no solutions to what I was undergoing.

https://ehtrust.org/wireless-radiation-impacts-the-brain/

8. At times, my husband’s blood sugar swings are perplexing; at times, neither of us can account for what is causing them. I wonder how much the wireless radiation and dirty

electricity we are continually exposed to, despite our mitigation efforts, has to do with it. We both experience, at times, poor sleep. I have had serious arrhythmia episodes where my heart goes wildly out of rhythm, in the middle of the night or at dawn, where I thought I would die. My husband's eyesight deteriorated to where he gave up his driver's license and no longer drives, something he always loved to do. He also suffers from intermittent severe back pain and sciatica, and I now, in the past year have developed neuropathic pain in my legs and feet. We understand by reading the science that pulsed electromagnetic radiation in the form of microwaves, especially, causes neurological damage. We have both sought help from various providers for this, which has been helpful, but has never solved the problem for either of us. How could it, when we are constantly exposed to one form of toxic irradiation or another, 24/7.

https://magdahavas.com/havas-video-presentations/diabetes-and-electrosensitivity/

9. In our town there were multiple people who were either injured by the installation of an electric smart broadcasting utility meter and/or had to leave their homes and go elsewhere, because they were made ill by their dwellings. More than one that I know of used professionals (master electrician, quasi building biologist and more) in an attempt to mitigate their situations, mostly unsuccessfully. One person spent many months, sleeping in her car and out of her home, despite protestations to the city to help her (our utility is city owned). Many of us who had protested the coming of the meters at City Council continued to raise our voices after the meters arrived, To this day, I and a number of others that I know continue to be plagued by this situation, with very little we can do to escape it. There is now literally 'nowhere to run and nowhere to hide,' as Elon's Starlink beams us all from space, and we have no say about that. Or anything else, really, as big telecom, cellular infrastructure, AI and data centers push their way into our cities, neighborhoods and parks, our churches, and steal our local resources while they're at it. People's consent and health apparently don't matter.

https://www.longmontleader.com/letters-to-the-editor/letter-longmonts-smart-meter-program-doesnt-live-up-to-the-hype-11125388

10. The above narrative not only describes one city's journey on the way to full-time irradiation by microwave emitting wireless devices but gives scientific and other references in the provided links. We additionally produced a Smart Meter Town Hall with noted local and international EMF scientists and experts speaking on the risks and dangers of smart

meters and ubiquitous electromagnetic /microwave radiation, to humans and wildlife. It can be viewed here:

https://smartmetertownhall.weebly.com/

11. No person should be forced against their will or consent to endure this kind of wireless torture that so many are now trying to avoid, but for which there is increasingly nowhere to escape to. Here is a small thumbnail of my personal opt-out experience on the city AMI website:

“Why do you want to opt-out of the AMI project?”

(Choices) Fire Safety, Radio Frequency Concerns, Cyber Security, Impact on Health

(My words) “All of the above, I wish to keep my electromechanical analog meter; please note - any acceptance by me of an opt out meter or AMI "smart" meter is done under duress and coercion, and I do not accept the installation of either meter on my dwelling of my own God given, sovereign free will.”

12. We need solutions, and we need them not now, nor yesterday, but decades past. None of this suffering (of so many people) needs to have happened, nor does it need to be. Our regulatory agencies are captured and are not working within their charters or mandates to protect “we the people.” We desperately need updated FCC RF guidelines that match the scientific evidence of RF/microwave harm that is being seen across the world (both the science and the harms); one wonders how so many people feign such profound unawareness or deny this fact. The below link includes literal mountains of submitted evidence in the EHT/CHD vs. FCC lawsuit decided in 2021; it contains the 27 volumes and approximately 11,000 pages of submitted evidence, including expert testimony, scientific studies and a trove of testimonials of people like me who have and are experiencing harm from this technology.
https://ehtrust.org/environmental-health-trust-et-al-v-fcc-key-documents/

13. Analog utility meters should be made available to all who want them. They are time-tested, trusted, and proven to be safe. All utilities ought to be required by law to provide analog meters to anyone who chooses one.

14. All included writings of opinion, above, contain additional links to demonstrate the veracity of what is being said in these pieces as well as in this Declaration.

I declare under penalty of perjury that the foregoing is true and correct.

Date: __Oct. 21, 2026_____

Dorothy aka Doe Kelly
