Key Telecom Studies & Case Studies

- **Hemberg, Switzerland (2002–2003):** Following the installation of a Swisscom cell tower, local residents reported severe sleep disorders, headaches, and ecological disruptions. Backed by the Mediation Authority for Mobile Communication & Environment (OMK), Dr. Karim applied special geometric shapes—including a custom "Hemberg Emitter" on the antenna and home-balancing cubes—which reportedly alleviated resident electrosensitivity symptoms. - **Mobile Phone Thermal Imaging:** Research evaluated BioGeometry mobile phone EQB stickers and room-level shapes, tracking external thermal changes on the head near the ear during active mobile usage across standard GSM, CDMA, and UMTS frequencies.
- **Wi-Fi & Environmental Studies:** Laboratory and architectural experiments (such as those from the Housing and Building National Research Center in Cairo) have tested BioGeometry shapes for mitigating indoor electromagnetic pollution and sick building syndrome. Animal and experimental models (including rodent studies exposed to router radiation) have explored whether BioGeometry forms help buffer behavioral and neurological stress markers.
