CEO Joseph Nolan, Jr., Attorney Callahan, Director of Meter Infrastructure Kellogg

Dear Eversource --

You continue to tread a dangerous path. Dangerous to me, that is. By that, I mean that you have been informed of the treachery that took place on my property in May of 2022. You, Eversource, acted with malice aforethought to remove a 100% accurate analog hybrid meter from my home as this then placed my life in mortal jeopardy. I am a disabled senior citizen of these United States and entitled to respect and protection. My life as I knew it prior to May 2022 has stopped.

All over the United States, people are trying to have their 'smart meters' removed. Many power companies have offered their customers a chance to opt-out from such meters.

Eversource, you are knowingly and directly responsible for the drastic decline in my health and the collapse of the various life supports that I have had in place. A detailed description of my dire situation has been sent to you time after time.

My name is Lily Marie Sinnamon. I am a resident of CT, retired and a disabled woman of 84 years. I live alone.

I am in need of immediate help from the Board members and CEO of Eversource. By that, I mean that any further delay in solving the problems caused by your duplicitous placement of a 'smart meter' upon my home will end catastrophically.

My neurological, respiratory and circulatory systems have reached a perilous plateau. My feet and toes are blue. My deep and intense headaches are constant. The nerve pain is constant, day and night. There is no longer any 'safe' room in my house. There are myriad symptoms that do not resolve.

This slow erosion of my health began on the day in early May 2022 when Eversource installed its 'smart meter'. I was forced to retreat into one back room in the house, furthest from the meter. I have lost the use of most of my

home including my kitchen, living room and day room. Your 'smart meter' is the only regular source of pulsed wireless signals that pervades my home.

My health decline is obvious to everyone. The return of my prior hybrid meter remains a medical necessity. That meter did not imperil my life, in contrast to the current one.

I am reiterating my request that you intercede to correct this situation. This continued deterioration of my health is terrifying. I can no longer recover.

CEO and Board Members of Eversource: Why am I being denied my reasonable ADA accommodation request to remove this injurious solid state meter from my life?

Your broadcasting solid state AMR meter creates a constant stream of short wireless signal pulses that erode my health at the cellular level[1]. These pulses repeat every thirty seconds, which is faster than I can recover from them, and so my health worsened precipitously these last nearly 36 months, starting with its installation in May 2022.

Moving from this home is not an option for me. My home used to be a sanctuary for me, until the Eversource meter 'upgrade' was added in May 2022.

Attorney Callahan has insisted that your broadcasting solid state AMR meter is not injurious solely based on the FCC short-term exposure guidelines. This is a false conclusion, since there are no long-term exposure guidelines from the FCC and there are no cited human health studies to support his claim. I am the evidence that these can be injurious! There are many people who respond poorly to them -- hundreds have testified over the years in numerous venues on this point.

Attorney Callahan has stated that Eversource will assist our electrician to move the meter. The electrician said that this will cost at least $3700 and unless Eversource will be paying my electrician to move this meter, then I have no financial resources to do so and that suggestion is thus a non-starter.

I don't want words, I require your action. I need a meter that either broadcasts much less frequently or even not at all OR re-install the prior analog hybrid meter which at least did not seem to trigger my health.

---

1 See EndNote EN1

Eversource in MA has already promised its clients that a non-broadcasting opt-out is available. I want this. I need this. Please make it happen NOW.

My life is in your hands. You don't seem to care or take any responsibility for what grievous harm you have done to me with that AMR meter. Open your minds to the possibility that not all technology is as benign as its proponents would have you believe.

End Notes

[EN1] Two primary mechanisms of pulsed RF harm are the 'calcium efflux' and 'oxidative stress'. Oxidative stressors are well known to be deleterious to human biology. The calcium ions, which are key to each cell membrane's integrity, are ejected from those membranes by pulsing RF signals and some are replaced with the more prevalent potassium ion's, leaving such cells 'leaky' and malfunctioning. This can manifest in many ways, but hyper-reactivity of the nervous system is one of them.
