The RadioFrequency in the UCSD Rancho Bernardo Infusion Room has Increased Since March 31, 2026. Is this the WiFi Router? I am experiencing health effects.

The highest reading in the Infusion room I saw on 5-12-26 was 0.679 microWatts per sq meter. Down in the lobby— I saw spikes of over 3.000 microWatts per sq meter, but was unable to photograph the spikes.

Here are screenshots of my photo library with all of the high readings that were not there prior to March 31, 2026. **You can see all all 25 are in the red zone.** There were also spikes higher and lower.
